Education

Yale University — New Haven, CT
Ph.D. Candidate in Economics. Fields: Industrial Organization, Financial Economics — Expected May 2028
M.A., M.Phil. — Dec 2025

FGV EPGE Brazilian School of Economics and Finance — Rio de Janeiro, RJ, Brazil
M.A. in Economics (GPA 9.18/10). Thesis: *Asymmetric Information and Split-Award Auctions* — Jan 2019 – Mar 2021
B.A. in Economics (GPA 9.37/10) — Feb 2015 – Dec 2018

Research

Ph.D. Dissertation: *Why Don't Deposits Move? Depositor Inertia and Deposit Competition in Brazilian Retail Banking*

- Built a quarterly panel of bank conglomerates by local market by deposit type (2016–2024) in Python, merging Banco Central do Brasil supervisory data (ESTBAN, IF-DATA), Pix payment-system data, and census, telecom, and survey sources;
- Extended the dynamic deposit model of Egan et al. (2025) with random-coefficients (BLP) demand; estimated depositor sleepiness with a control-function correction for endogenous spreads and small-sample cluster-robust inference, and demand by nonlinear GMM, on Yale's HPC cluster;
- Found that over 90% of balances go a full year without being re-optimized, so deposits barely respond to spreads on impact even though active depositors are price-sensitive; the Pix launch did not detectably reduce inertia.

Experience

Research Assistant to Dirk Bergemann, Yale University — May 2023 – Mar 2024

- Analyzed optimal information sharing between consumers and producers through a data intermediary, comparing for-profit and consumer-fiduciary intermediaries;
- Developed an information-design model of screening with two quality levels, characterizing buyer-optimal signal distributions and the seller's optimal pricing rule.

Research Assistant to Humberto Moreira & Marcelo Sant'Anna, FGV EPGE — Oct 2021 – Jun 2022

- Developed a duopoly model of automobile insurance with consumers heterogeneous in risk type and insurer preference, using SUSEP regulatory data (2010–2020);
- Interviewed industry participants on pricing variables and Open Insurance/Open Banking; contributed to a report on market power, screening, and mergers in the Brazilian auto insurance market.

Macroeconomics Research Intern, Bahia Asset Management — Feb 2017 – Feb 2018

- Ran monthly GDP and CPI nowcasting models for selected economies, delivered to the trading desk around data releases;
- Maintained the macroeconomic database (US, Europe, UK, Latin America) supplying the research team and trading desk; built the Swedish data module; compiled a weekly tracker of sell-side CPI and GDP forecasts.

Teaching Assistant — 2016 – 2026

- Yale University (2024–2026): Introduction to Data Analysis and Econometrics; International Economics; Mathematics and Economics Tutor;
- FGV EPGE (2016–2022): Calculus I–II, Public Finance, undergraduate and graduate Microeconomics.

Skills

Programming: Python, R, MATLAB; Git, LaTeX
Methods: Structural estimation (GMM, BLP), IV/control functions, panel econometrics, dynamic programming
Languages: Portuguese (native), English (fluent), French and Spanish (advanced)

Honors and Scholarships

- Graduate Fellowship Yale University — 2022 – Present
- Bernhard Fellowship Yale University — 2024 – 2025
- 1st place nationally, ANPEC exam (Brazil's graduate entrance exam in economics); FGV EPGE Master's scholarship — 2019 – 2020
- Scholarship for Master's Studies (CAPES) — 2019 – 2020
- Undergraduate Scholarship (FGV EPGE) — 2015 – 2018
